

LECTURE-1Javascript :-

It is the most popular scripting language which works in all the major browsers.

→ JS is a dynamic programming language as it can update and change both HTML and CSS.

→ JS can be used in <body> section or <head> section or it can be an external file.

→ The JS file must be saved with .js extension.

Ex:-

```
<html>
<body>
<script type = "text/javascript">
    document.write ("Hello World...");
</script>
</body>
</HTML>
```

→ The commands or syntaxes that are written inside the <script> and </script> tags are javascript. If the <script> tags are ^{not} written, the browser may not understand the syntax as javascript.

→ Javascript is case-sensitive.
